

## Pollinator Dichotomous Key Activity Directions

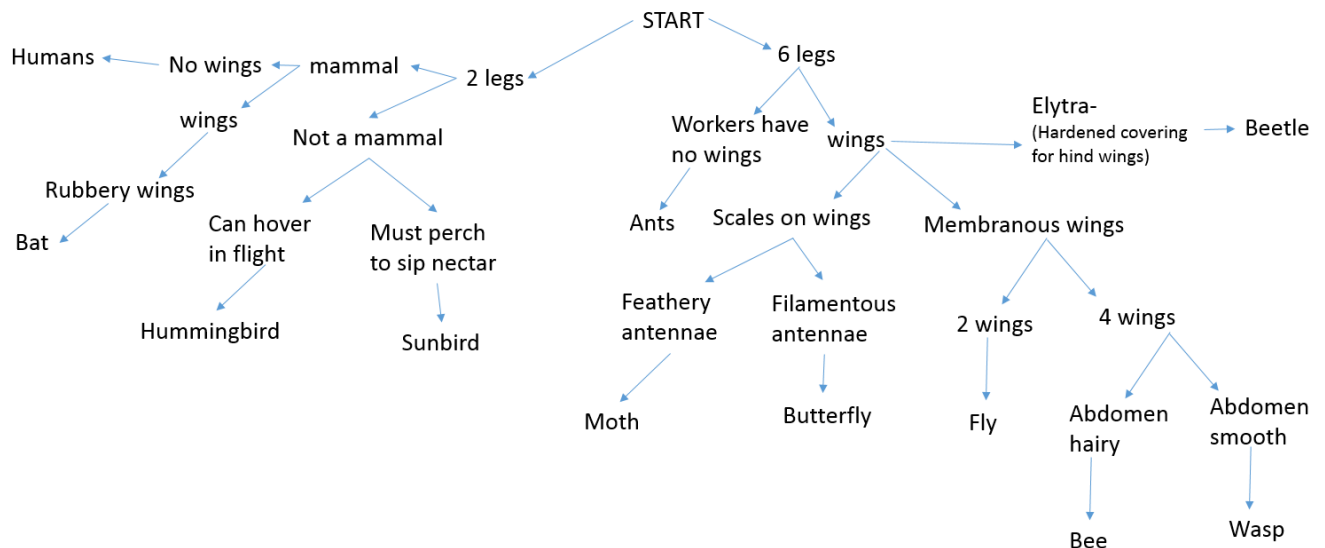

### To prep before event:

Print out and laminate cards from pollinator key final cards, pollinator maps, and pollinator facts PowerPoint files. Be sure to print all slides one sided.

Depending on where your event will be held you will need some wire stakes (for grass) or painters tape (classroom floor) to hold the key cards in place on the ground.

### Set-up:

Put pollinator key cards on the ground in the following order and affix securely with painters tape or stakes. Just has to be in order, the shape of the map/ key doesn't matter.

### Directions for the activity:

Have participants stand on the start card.

Provide each participant with a pollinator map to follow to determine what kind of pollinator they are.

At the end of the clues share with them some of the fun facts about that pollinator from the pollinator facts sheet and show them the photo of their pollinator.
