

CONNER PRAIRIE

STEP INTO THE STORY

Pollinator Habitat

CONNER PRAIRIE

STEP INTO THE STORY

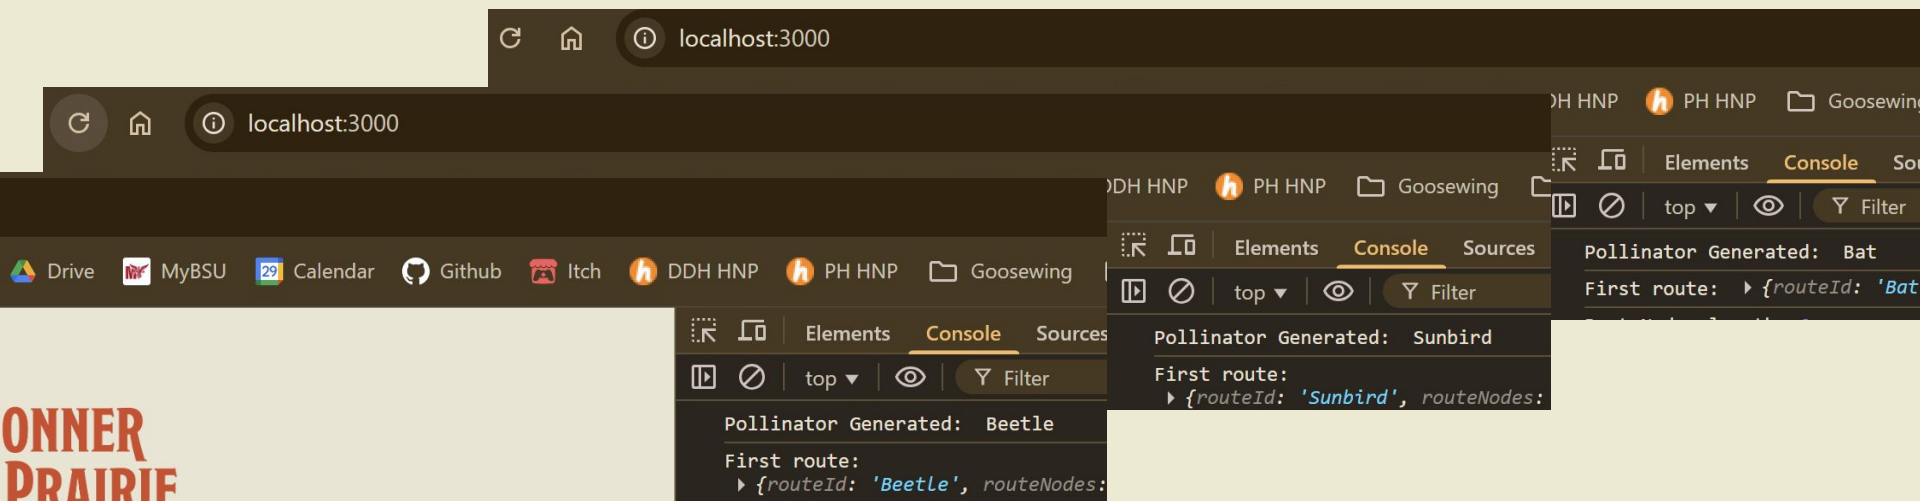

Digitizing a
paper-based
educational activity to
teach Conner Prairie
guests about pollinator
facts in a fun,
interactive way

Iteration Features

Randomly Generated Pollinator

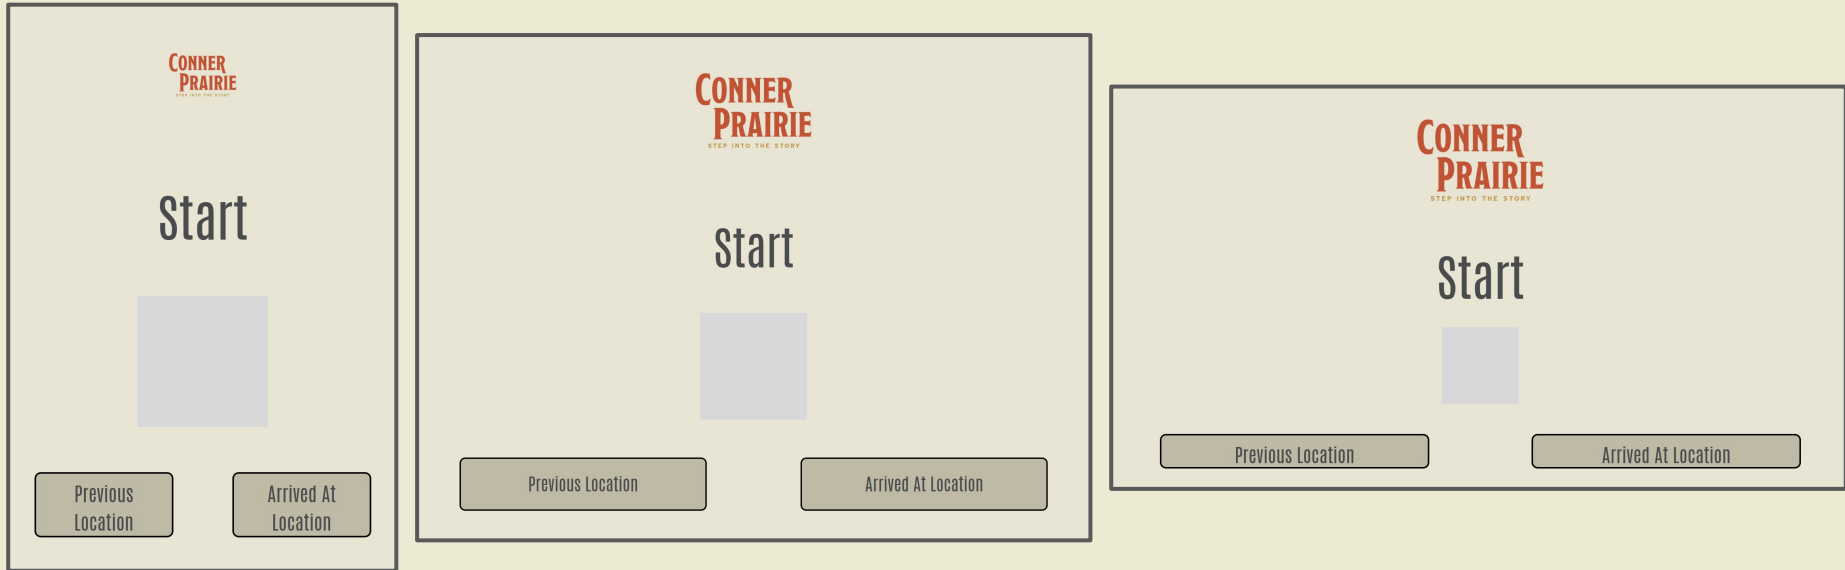

When the website is refreshed, a new pollinator and route is randomly generated

Iteration Features

Web Page UI Visual

The webpage is simple to read and understand on any screen size and screen ratio and appears uniform in Conner Prairie branding

Iteration Features

Next Page Button

The user can click the next button labeled "Arrived At Location" to view their next location

Iteration Features

Previous Page Button

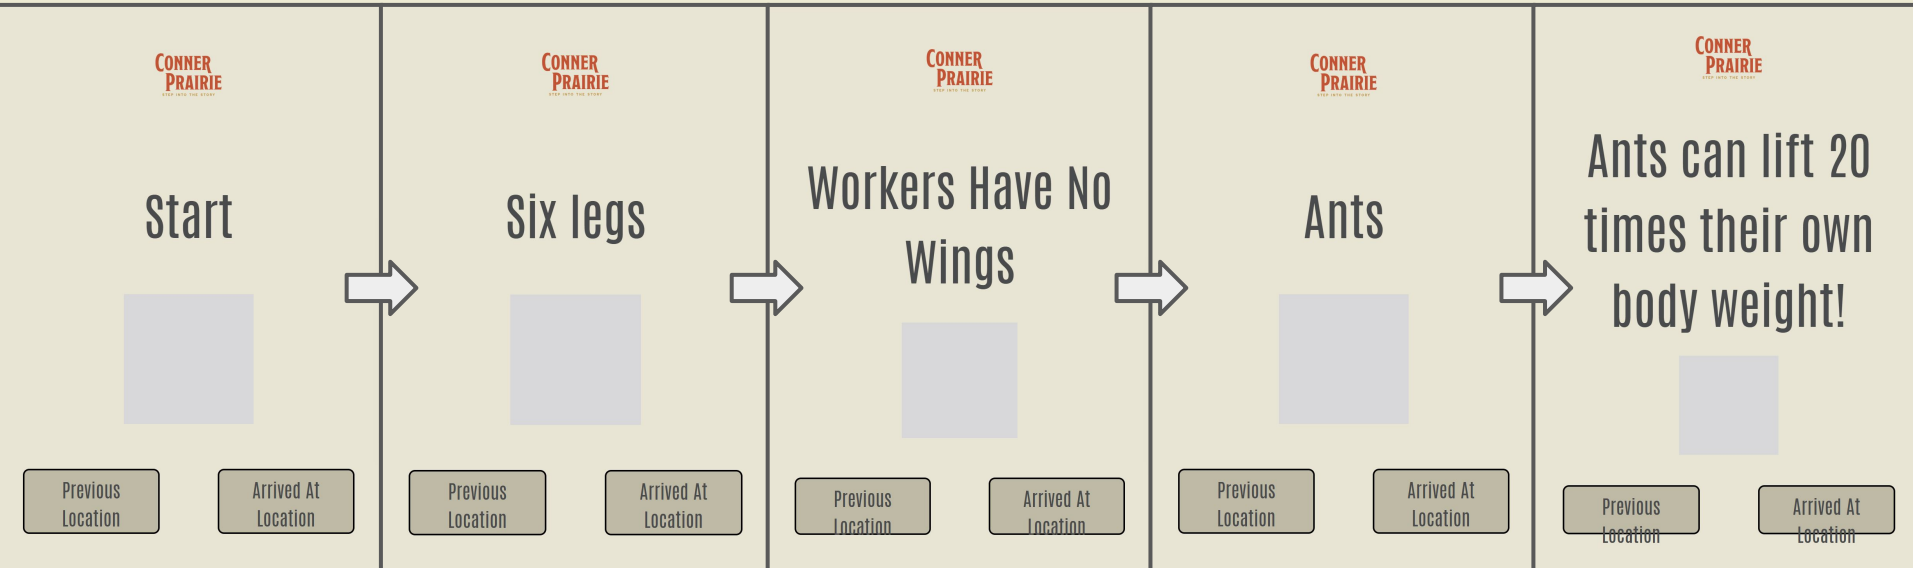

The user can click the back button labeled "Previous Location" to view their previous location

Iteration Features

Full Route and Facts

The user can play through the full game, including viewing facts about their pollinator after completing their route

Second Iteration Features

High Priority

- The user should generate a unique pollinator each time
 - The game should have an option to automatically read text aloud
 - The game should have an option to adjust text size
 - The game should have a high contrast colors mode
 - The game should display an relevant image related to the current station the user is at
 - The user should be able to change their accessibility settings from a menu, which is found from a button on the home screen
-

Medium Priority

- The user should be presented with title screen at the beginning of the route sequence
 - The game should have an option to click a button to read text aloud
 - The game should have an option to adjust the text font
 - The user shall be able to join a session using a session code when they first open the website
 - The user will find the game's website using a QR code
-

Low Priority

- The game's paths should be able to be enabled in an active session
- The game's paths should be able to be disabled in an active session

Client Feedback

As of this Monday, 10 / 27

- Excellent use of the Conner Prairie branding
- Clarification on image sourcing - now we can find them ourselves, as opposed to being provided by client
 - This is now a task for iteration 2
- Prioritization of use cases to implement for iteration 2
 - We will begin on incorporating Use Case 3 first
- Appreciated the overall simplicity and ease of use of the software
- Ready to use immediately, so we will be prioritizing shipping in the next iteration (as opposed to next semester as initially planned)

Team Retrospection

- We learned to start earlier and faster on our tasks and planning
- Struggled with learning React and Typescript because it was the first time a lot of us were using these languages
- Sacrificed modularity, stronger functionality, and testing potential for the first iteration
- For next iteration, we plan on working closer together, planning a stricter schedule for ourselves and as a team, and starting as early as possible on writing code
